

PRODUCT LIST

STEEL STRIPS in coils

Quality:
S235, S275, S355

Chemical and mechanical characteristics:
EN 10025-2/2004

Thickness of steel strips:

0,5 mm – 12,0 mm

Width of steel strips:

20 – 2000 mm

We have several lines for longitudinal cutting of steel strips that has been used in production of cold rolled profiles as well as product that can be manufactured by the dimensions and needs of the customers.

The lines are used for longitudinal cutting of the coils into the strips that later can be rolled in coils.

Our lines can cut steel, galvanized, copper, aluminium and plastificated coils.
